is the internet erasing national borders will the future of the net be set by internet engineers rogue programmers the united nations or powerful countries who s really in control of what s happening on the net in this provocative new book jack goldsmith and tim wu tell the fascinating story of the internet s challenge to governmental rule in the 1990s and the ensuing battles with governments around the world it s a book about the fate of one idea that the internet

might liberate us forever from government borders and even our physical selves we learn of google s struggles with the french government and yahoo s capitulation to the chinese regime of how the european union sets privacy standards on the net for the entire world and of ebay s struggles with fraud and how it slowly learned to trust the fbi in a decade of events the original vision is uprooted as governments time and time again assert their power to direct the future of the internet the destiny of the internet over the next decades argue goldsmith and wu will reflect the interests of powerful nations and the conflicts within and between them while acknowledging the many attractions of the earliest visions of the internet the authors describe the new order and speaking to both its surprising virtues and unavoidable vices far from destroying the internet the experience of the last decade has lead to a quiet rediscovery of some of the oldest functions and justifications for territorial government while territorial governments have unavoidable problems it has proven hard to replace what legitimacy governments have and harder yet to replace the system of rule of law that controls the unchecked evils of anarchy while the net will change some of the ways that territorial states govern it will not diminish the oldest and most fundamental roles of government and challenges of governance well written and filled with fascinating examples including colorful portraits of many key players in internet history this is a work that is bound to stir heated debate in the cyberspace community

The SAIC Solution *1997-06-16*

in this book konstantinos komaitis identifies a tripartite problem intellectual institutional and ethical inherent in the domain name regulation culture using the theory of property komaitis discusses domain names as sui generis e property rights and analyses the experience of the past ten years through the uniform domain name dispute resolution policy udrp and the anticybersquatting consumer protection act acpa the institutional deficit he identifies generates a further discussion on the ethical dimensions in the regulation of domain names and prompts komaitis to suggest the creation of an environment based on justice the relationship between trademarks and domain names has always been contentious and the existing institutions of the udrp and acpa have not assisted in

alleviating the tension between the two identifiers over the past ten years the trademark community has been systematic in encouraging and promoting a culture that indiscriminately considers domain names as secondclass citizens suggesting that trademark rights should have priority over the registration in the domain name space komaitis disputes this assertion and brings to light the injustices and the trademark oriented nature of the udrp and acpa he queries what the appropriate legal source to protect registrants when not seeking to promote trademark interests is he also delineates a legal hypothesis on their nature as well as the steps of their institutionalisation process that we need to reverse seeking to create a just framework for the regulation of domain names finally he explores how the current policies contribute to the philosophy of domain names as second class citizens with these questions in mind komaitis suggests some recommendations concerning the reconfiguration of the regulation of domain names
